2026-04-29 10:21:15	File download: /etc/passwd	apache	server1	192.168.1.10	data-exfiltration

8 Incident report (summary)

Incident Investigation Report

1. Overview

- On April 29, 2026, an unauthorized access was detected on server1. The attacker gained access via brute force login and performed suspicious activities leading to possible data exfiltration.

2. Timeline of Events

- 10:15:21 – Multiple failed login attempts for user admin (IP: 192.168.1.10)
- 10:16:02 – Successful login for user admin via SSH
- 10:17:13 – Command executed using sudo
- 10:18:02 – User added to sudoers file (privilege escalation)
- 10:20:45 – Outbound connection to external IP 203.0.113.5
- 10:21:10 – HTTP request to /download.php
- 10:21:15 – Sensitive file downloaded (/etc/passwd)

3. Findings

- Brute force attack succeeded.
- Attacker escalated privileges.
- Data exfiltration suspected.

4. Recommendations

- Block malicious IP 192.168.1.10.
- Enforce strong passwords and account lockout policy.
- Monitor outbound connections.
- Enable multi-factor authentication.
